## STEM FOR ALL - THE YOUNG SCIENTISTS CLUB IS ON A QUEST TO HAVE HANDS-ON STEM LEARNING IN MORE HOMES AND CLASSROOMS

*This year marks 20 years of award-winning products reaching children world-wide with subscriptions, classroom packs, and retail products*

Jamestown, RI (September, 2019) – The Young Scientists Club has been creating, manufacturing, and selling award-winning science kits for twenty years with a mission to offer children quality, science-related products that will fascinate them with the wonders of scientific discovery and spark their interest in future scientific endeavors. All our products are designed by a team of Harvard graduates, scientists, educators, and parents with one purpose in mind - to combine fun and fascination with quality and learning in each and every product.

The Young Scientists Club has collaborated with Scholastic for the past thirteen years and has been the exclusive creator of The Magic School Bus themed science kits as well as the Clifford the Big Red Dog science kit series. In addition, The Young Scientists Club supplies schools, after-school programs, and camps with specialized school curriculum packs that teachers have prized nationwide for years. We are now on a quest to reach children that do not have access to quality STEM products, whether in the classroom (school packs), after-school programs (group packs), or at home (subscription kits).

Esther Novis, founder and CEO of The Young Scientists Club, states, “We are actively looking for partners that will help The Young Scientists Club place these products in the hands of children and teachers in underserved communities.” She continues, “It is crucial that all children have exposure to the various STEM fields early on so that future opportunities become unlimited for them.” The Young Scientists Club is very excited about this new STEM FOR ALL initiative and hopes that others will join them on this adventure.

## **ABOUT THE YOUNG SCIENTISTS CLUB**

It's been 20 years since Esther Novis, a mother of five and a former Harvard-trained biologist, started The Young Scientists Club as a summer science camp for her then 5-year-old son. Friends from other parts of the country told Novis they wanted to duplicate her concept and the idea for a science subscription service was born! The subscription kits are now mailed monthly to thousands of children around the world and the company's retail kits are sold in hundreds of specialty stores. In addition to developing new products for The Young Scientists Club, this wise mom has many years of experience teaching at Phillips Academy, Andover and has written the science column for Parents Magazine plus wrote science experiments for the new science curriculum by McGraw-Hill Publishing.
